

Part 1 is the new JAG stop for the A&A frame. It has the curved outsides to fill in the gap some people have experienced. It also has smaller slots for shoulder bolts that can be used with the Satellite motor.

Parts 2 to 4 are hubs that the builder can use between the leg and the frame. We have included one 0.50 in thick piece and two 0.25 inch pieces. It is up to the builder to choose how many they want to use. Normally the gap between the body and legs is 0.5 inches.

It is recommended that you test fit the parts together to understand the assembly procedure before gluing the parts.

Lay out the parts as follows for assembly and to make sure you have all the parts
