

Image 1

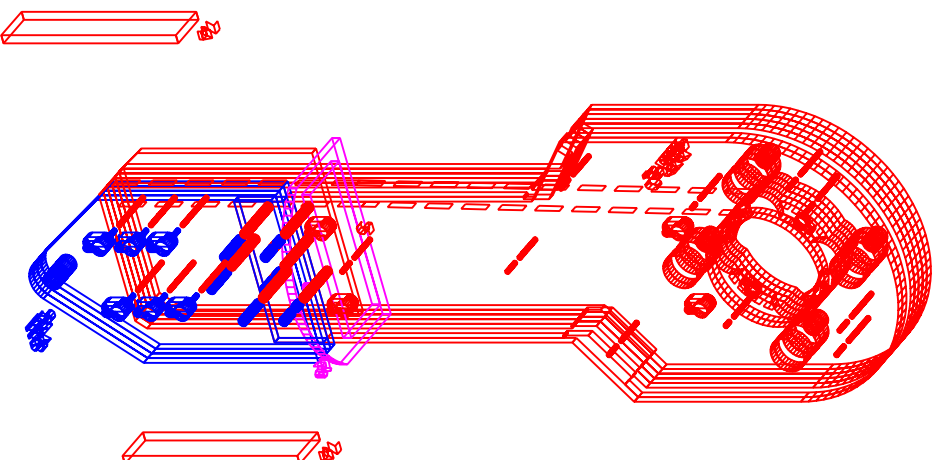

Image 2

Image 1 is an isometric view of all the parts. Image 2 is the parts assembled. Parts 7A will go into the small cavities that the ankle will provide once it is assembled. This area is covered with sheet styrene so it is not seen but the Parts 7A will make it solid if desired.

The shim Part 23 is not shown here but can be installed now or when the horse shoe is assembled.

**NOTE:** Parts 11A and 11B were a late addition to the design. Before there were three Part 9 pieces per side. The small holes helped locate the ankle parts (Cylinder, Cylinder holder, resin ankle front) Using the horse shoe mounting idea we decided to include these for the ankles also.
